

IPHCA

1

no

You cannot become infected from receiving the COVID-19 vaccine because the vaccine doesn't contain the live virus.

8

no

Getting the COVID-19 vaccine will **not change** your body in any way.

2

YES

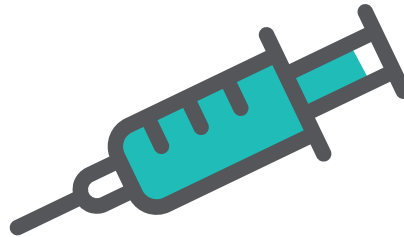

You should get the vaccine even if you've had COVID-19. The length of natural immunity is unknown. People who have already had COVID-19 should take the vaccine to fight reinfection.

7

no

COVID-19 vaccines **do not change or interact with your DNA** in any way.

8 KEY FACTS

About the COVID-19 Vaccine

Let's set the record straight on some of the myths circulating about COVID-19 vaccines.

To schedule a COVID-19 vaccine, visit: coronavirus.illinois.gov/s/vaccination-location

3

YES

The COVID-19 vaccine is safe! It was developed with all the extensive rigor, trials and approvals necessary to create trusted vaccines.

6

no

Neither the Pfizer nor Moderna vaccine uses cells from fetal tissue

5

no

There is currently **no evidence that COVID-19 vaccination causes any problems** with pregnancy and fertility.

4

YES

You may experience side effects, which means the vaccine is working. Symptoms should go away in a day or two.
